

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1 - 30. (canceled)

31. (new) A system for expediting security checking, comprising:
an interface allowing an individual to order a security clearance, wherein ordering the security clearance results in at least a verification of the individual's identity; and
a check-point to which the verification is routed, wherein the verification occurs before the arrival of the individual at the check-point.
32. (new) The system according to claim 31, wherein the interface is a telephone system.
33. (new) The system according to claim 31, wherein the verification is confirmed at the check-point by a code obtained by the individual via the interface.
34. (new) The system according to claim 33, wherein the code is a random multi-digit code presented by the individual at the check-point.
35. (new) The system according to claim 31, wherein the verification is routed to a plurality of check-points, allowing for the security clearance to apply to the plurality of check-points.
36. (new) The system according to claim 31, wherein the at least one security measure includes a security acceptance rating generator, wherein the generator assess the security risk of the individual.
37. (new) The system according to claim 36, wherein the generator assess the security risk of the individual based on the individual's personal information.
38. (new) The system according to claim 36, wherein the generator assess the security risk of the individual based on information provided by at least one third party.

39. (new) The system according to claim 31, wherein the at least one security measure includes a further verification of the individual's identity in addition to the verification routed to the check-point.
40. (new) The system according to claim 31, wherein the check-point provides access to a public venue.
41. (new) The system according to claim 31, wherein the verification minimizes at least one security measure performed at the check-point once the individual arrives at the check-point.
42. (new) A method for streamlining security, comprising:
 assigning a security clearance to an individual via an interface, wherein the security clearance is based on at least a verification of the individual's identity; and
 receiving the verification at a check-point, wherein the verification occurs before the arrival of the individual at the check-point.
43. (new) The method according to claim 42, wherein the interface is a telephone system.
44. (new) The method according to claim 42, wherein the verification is confirmed at the check-point by a code obtained by the individual via the interface.
45. (new) The method according to claim 42, wherein the verification is routed to a plurality of check-points, allowing for the security clearance to apply to the plurality of check-points.
46. (new) The method according to claim 42, wherein the at least one security measure includes a security acceptance rating generator, wherein the generator assess the security risk of the individual.

47. (new) The method according to claim 42, wherein the at least one security measure includes a further verification of the individual's identity in addition to the verification received at the check-point.
48. (new) The method according to claim 42, wherein the check-point provides access to a public venue.
49. (new) The method according to claim 42, wherein the verification minimizes at least one security measure performed at the check-point upon the individual's arrival
50. (new) A method for expediting security by providing a security clearance to an individual, comprising:
 - providing to an individual a verification of the individual's identity via an interface; and
 - providing the verification to a check-in location, wherein the verification is performed before the arrival of the individual at the check-in location.
